Explanatory Notes

Change of Name

The term *employment injuries* is now used to describe the workers' compensation-based statistics instead of the term industrial accidents. This has been introduced in order to standardise terminology throughout the ABS.

Introduction

2. Statistics of employment injuries shown in this publication were derived from reports of compensative accidents made available to the ABS by the Workers' Compensation Board of Queensland and the Queensland Police Department, and are compiled on the basis of the financial year in which the accident occurred.

Scope of the Statistics

3. In Queensland, workers' compensation insurance is confined solely to the Workers' Compensation Board of Queensland which commenced operations on 1 July 1978. With policies issued under the *Workers' Compensation Act*

1916-1988, employers indemnify themselves against all sums for which, in respect of injuries to workers employed, they may become legally liable by way of compensation or damages in relation to that injury. Claims made on the Workers' Compensation Board of Queensland are the main source of information on compensative employment injuries.

4. Self-employed persons are not obliged to insure, hence accidents of a number of workers in primary industry and in the professions etc. are not recorded. Also members of the Australian Government Service, including Australia Post and Telecom Australia, are excluded by the provisions of the Act, and coverage is thereby restricted in the administrative and communications industries. Accidents of members of the Police Force, although excluded under the Act, are collected separately and are included in the tables.

5. The scope of the collection is limited to those employment injuries causing death, permanent disability or temporary disability resulting in the absence of the injured person from work during the entire interval corresponding to the hours of his or her regular shift on any one or more calendar days subsequent to the date of the injury.

Explanatory Notes (continued)

Definitions

6. *Employment injuries* include occupational injuries, occupational diseases, commuting injuries and recess injuries as defined below.
7. *Occupational injuries* are injuries resulting from accidents arising out of, or in the course of, employment. In this context, the term accident refers to a traumatic event and includes those during journeys on duty. These were previously called work injuries.
8. *Occupational diseases* are employment injuries resulting from repeated or long-term exposure to one or more hazardous events or agents, and employment injuries which result from a single traumatic event where there is a long latency period. Occupational diseases are classified to the three digit categories of the Ninth (1975) Revision of the World Health Organisation's International Classification of Diseases.
9. *Commuting injuries* are injuries resulting from accidents occurring while journeying to or from work while not on duty nor in a recess period.
10. *Recess injuries* are injuries resulting from accidents occurring during recess periods.
11. *Fatal injuries or diseases* have been included in the tabulations on the condition that claims for them were accepted by the Workers' Compensation Board of Queensland or the Police Department on or before 31 December 1987.
12. *Permanent disability* results from an injury or disease which does not cause death but results in the complete loss or loss of use of any member or any part of a member of the body, or any permanent impairment of functions of the body or part thereof. All permanent disabilities have been tabulated unless rejected for workers' compensation.
13. *Temporary disability* results from an injury or disease which does not cause death or permanent impairment but renders the injured person unable to perform a regularly established job during the entire time interval corresponding to the hours of a full regular shift. Temporary disabilities are only included in the tabulations if compensation commences within 6 months of the accident.
14. *Duration of temporary disability* refers to the number of calendar days lost rather than to the actual number of working days lost.
15. *Type of accident* is the event which directly resulted in the injury, i.e. the manner in which contact was made between the injured person and the object or substance causing the injury.
16. *Agency related to the accident* is the agency, i.e. working environment, production equipment, animal etc., which, because of its hazardous nature or condition, precipitated the event designated as the accident.
17. *Industry classification* is according to the Australian Standard Industrial Classification, 1983 Edition.
18. *Occupation classification* is according to the Classified List of Occupations, Revised November 1980.
19. *Bodily location of injury* refers to the part of the body injured. In cases where there is a major and minor injury resulting from the accident, only the major location is coded. Multiple locations are coded only when there is a major injury to more than one location.

Industrial Accidents, Tasmania (6301.6) - Latest issue: 1986-87

21. Current publications produced by the ABS are listed in the *Catalogue of Publications* (Catalogue No. 1101.0) and those produced by the Queensland Office are listed in *List of Publications* (Catalogue No. 1101.3). A *Publications Advice* (Catalogue No. 1105.0) is issued on Tuesdays and Fridays which lists publications to be released in the next few days. These publications are available from any ABS Office.

Unpublished Statistics

22. The ABS can also make available certain employment injuries statistics which are not published. Where it is not practicable to provide the required statistics by telephone, they may be available in other forms, such as photocopy, computer printout or clerically extracted tabulation. A charge may be made for providing unpublished statistics in these forms.
23. For further information on these unpublished statistics, contact Keith Carter by telephoning Brisbane (07) 222 6054, or write to Information Services at the address above.

D.N. ALLEN
 DEPUTY COMMONWEALTH STATISTICIAN

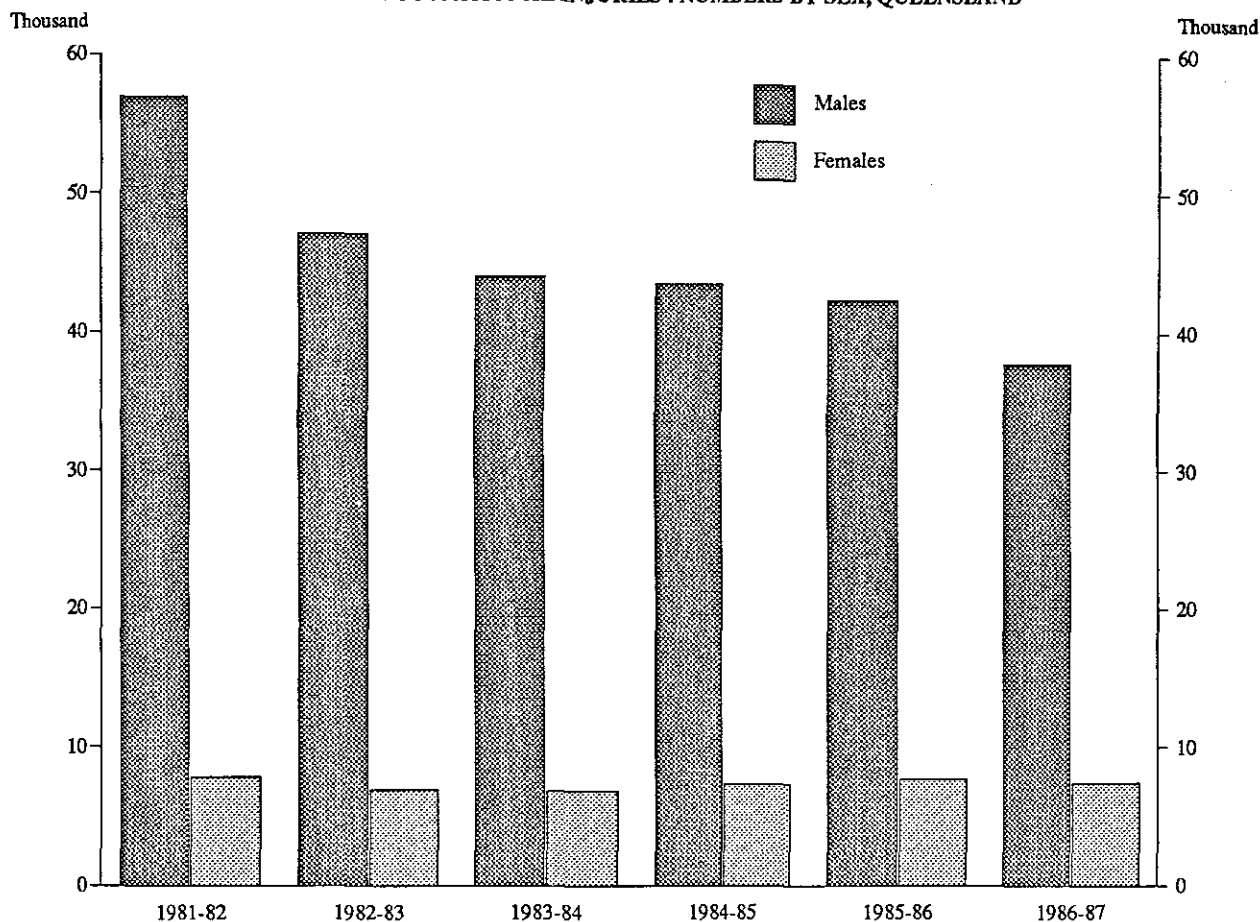

Summary of Findings

There were 45,686 occupational injuries sustained during 1986-87, down 9.6 per cent on the number in the previous year. In contrast, occupational diseases increased by 8.7 per cent, to 2,522 cases. Accidents occurring on journeys to or from work or during recess periods are also compensated. During 1986-87, there were 2,037 of these, representing 4.1 per cent of all injuries or diseases compensated.

Occupational Injuries

The 9.6 per cent decrease in occupational injuries was the largest drop since 1982-83 when occupational injuries decreased by 16.3 per cent from those in the preceding year. In the latest year, Darling Downs Statistical Division showed the largest decrease, of 21.3 per cent, while Brisbane Statistical Division dropped by the same percentage as for Queensland as a whole, 9.6 per cent. Mackay Statistical Division was the only one to show an increase (of 1.4 per cent). The fall was larger for males than females (10.8 per cent for males, compared with 3.2 per cent for females) and was evident across almost all industry and occupation groups.

DIAGRAM 1 - OCCUPATIONAL INJURIES : NUMBERS BY SEX, QUEENSLAND

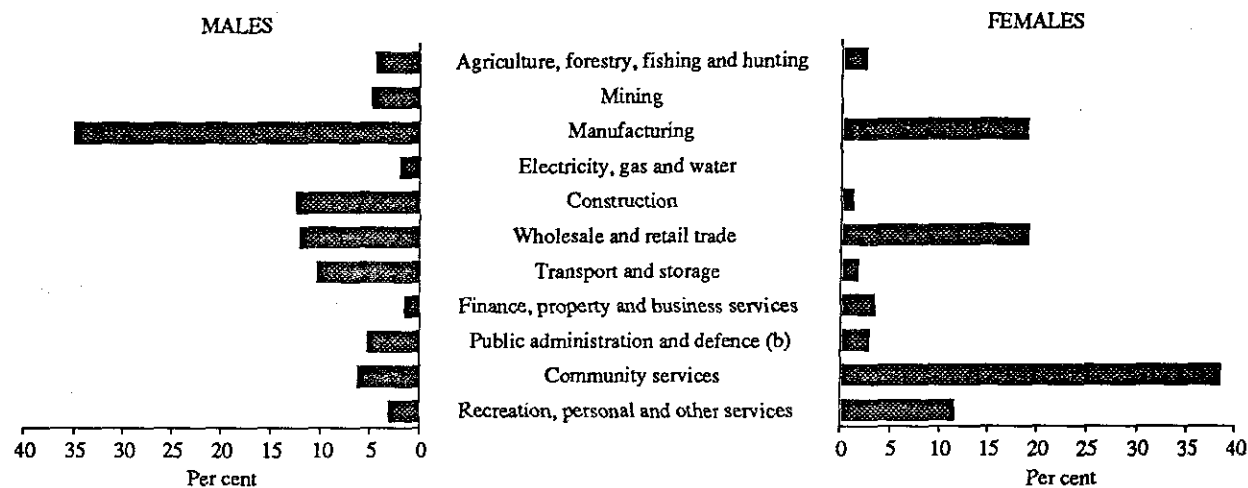

While there has been a decrease in occupational injuries in total, there has been an increase in the most severe accidents, i.e. those resulting in death or permanent disability. A total of 69 males was fatally injured in 1986-87 compared with 55 in the previous year. The increase in part was due to the rise in fatalities for miners, quarrymen etc. to 11 in 1986-87 from 2 in 1985-86. In the previous 5 year period the major contributing occupation groups for fatalities relating to males were road transport workers and farmers, fishermen and timbergetters; in 1986-87 13 and 3, respectively. There were also 4 females killed in work accidents. Injuries resulting in permanent disability increased for males by 7.1 per cent while for females there was a decrease of 14.1 per cent during 1986-87.

However, injuries resulting in temporary disability accounted for 98.5 per cent of all injuries during 1986-87. More than half of these caused an absence from work of 1 week or less. Total days lost from temporary disabilities in 1986-87 were 1.2 million. Although the number of temporary disabilities has decreased over the past 6 years in respect of males, the average number of days lost has increased from 22.1 in 1981-82 to 26.5 in 1986-87. The annual average days lost for females has also increased from 27.0 in 1981-82 to 30.2 in 1986-87, but unlike the decline for males, females temporary disability figures have not decreased as sharply.

Occupational injuries sustained can be analysed according to the industry division of the injured persons' employers. Manufacturing industry accounted for 35.3 per cent of the 38,058 injuries to males in 1986-87, being almost the same proportion as for construction (12.7 per cent), wholesale and retail trade (12.3 per cent) and transport and storage (10.6 per cent) industries combined. Of the 7,628 injuries to females, 38.5 per cent were to workers in community services industries (e.g. hospitals, nursing homes, schools, community organisations), 19.1 per cent to workers in the wholesale and retail trade and 18.9 per cent to workers in manufacturing industries.

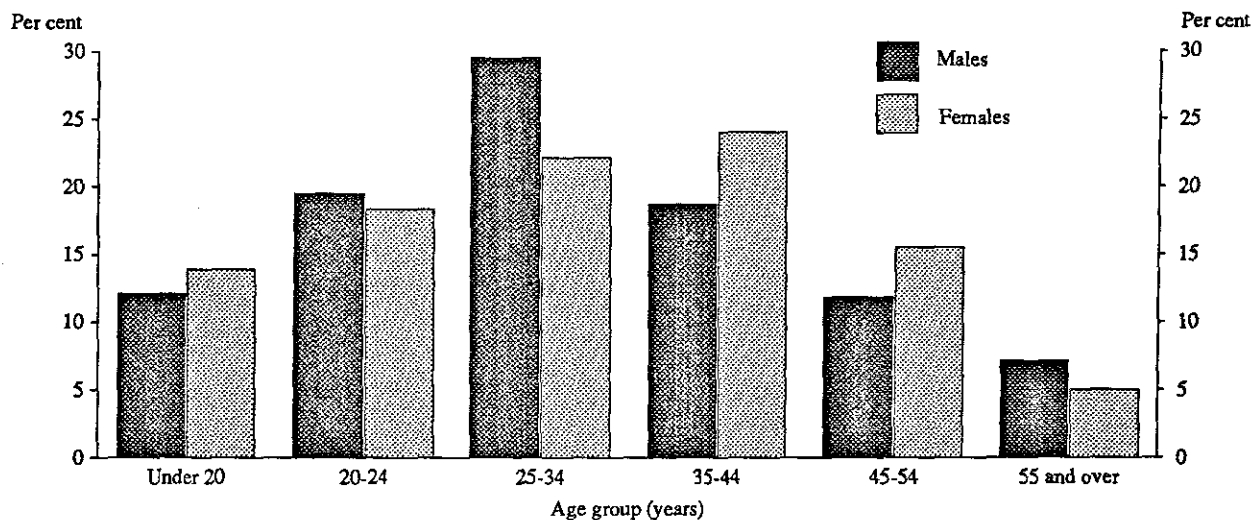

Summary of Findings (continued)

DIAGRAM 2 - OCCUPATIONAL INJURIES: INDUSTRY DIVISIONS (a) BY SEX, QUEENSLAND, 1986-87

For both males and females, almost one-third of occupational injuries were suffered by people under 25 years; persons under 35 years accounted for 61.7 per cent of injuries to males and 54.9 per cent of injuries to females.

DIAGRAM 3 - OCCUPATIONAL INJURIES : AGE GROUP AND SEX, QUEENSLAND, 1986-87

When 1986-87 occupational injuries were categorised by type of accident, the largest group was over-exertion/strenuous movement (31.5 per cent of injuries to males and 42.2 per cent of injuries to females). Stepping on, striking or struck by objects accounted for 27.2 per cent of injuries to males and 17.2 per cent to females. Falls accounted for 20.1 per cent to males and 23.9 per cent to females.

In relation to the nature of injuries sustained in 1986-87, sprains and strains accounted for 47.9 per cent of injuries (45.3 per cent for males and 60.6 per cent for females) and lacerations and open wounds 20.7 per cent (22.0 per cent for males and 13.8 per cent for females). Over the period 1981-82 to 1986-87, the proportion of sprains and strains has consistently increased (41.8 per cent to 47.9 per cent), while the proportion of lacerations and open wounds has continually decreased (25.8 per cent to 20.7 per cent); all other injury types have changed little.

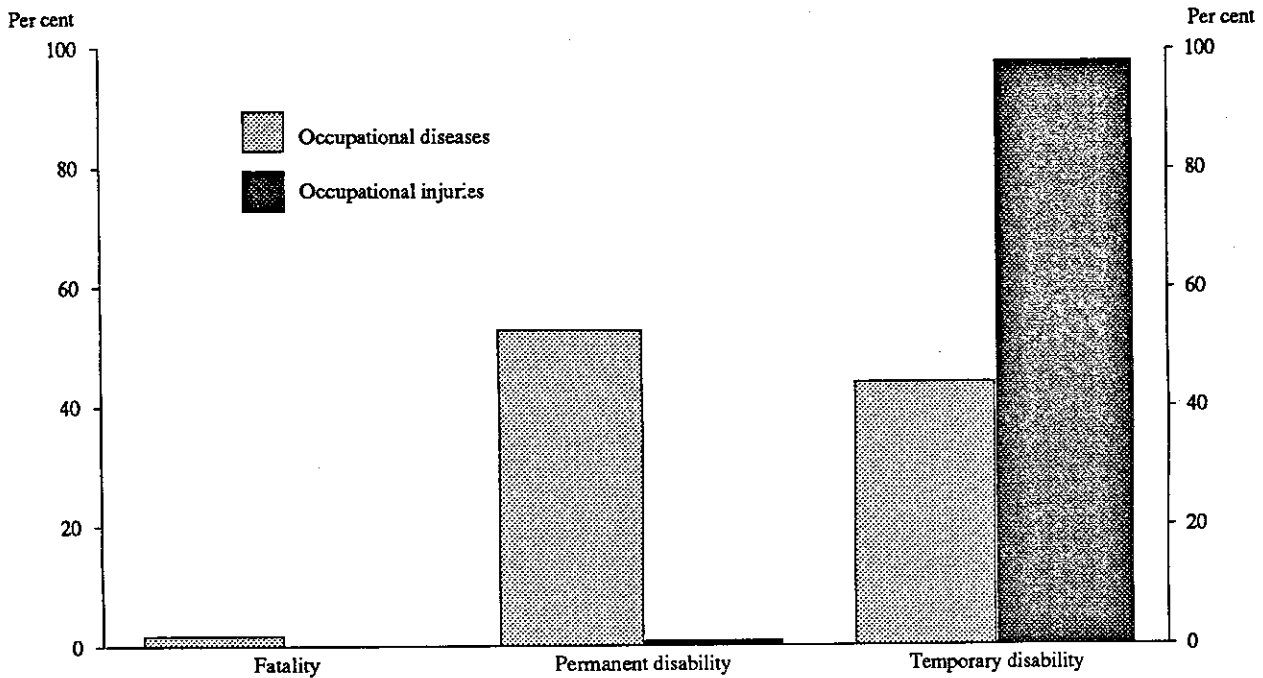

Occupational Diseases

Between 1985-86 and 1986-87, occupational diseases increased by 8.7 per cent. Occupational diseases for males rose by 21.0 per cent to 2,021 cases in 1986-87. Diseases for females dropped by 22.9 per cent to 501 cases.

Summary of Findings (continued)

Although occupational diseases as a percentage of occupational injuries are only 5.5 per cent, they result in a similar number of fatalities (in 1986-87, 53 from diseases, 73 from injuries). Also, there were more permanent disability cases caused by occupational diseases than from occupational injuries (1,343 from diseases, 596 from injuries).

DIAGRAM 4 - OCCUPATIONAL DISEASES AND INJURIES: EXTENT OF DISABILITY, QUEENSLAND, 1986-87

Deafness is the most common occupational disease (52.9 per cent of diseases in 1986-87). The number of deafness cases increased 37.0 per cent between 1985-86 and 1986-87 and has almost trebled between 1981-82 and 1986-87. Industrial deafness is almost exclusively sustained by males. Musculoskeletal system diseases is the next most prevalent disease group (22.4 per cent of diseases in 1986-87) comprising almost entirely tenosynovitis and tendonitis, often diagnosed in repetitive strain injury cases. More than half of these diseases are of females. Between 1985-86 and 1986-87 the total for musculoskeletal diseases fell sharply from 795 to 565 cases.
